

REGISTRY RETURN · NH-ERR-404

SIGNAL VOID

PRODUKTBLAD · OPERATIONAL REFERENCE

OPERATOR / REGISTRY RETURN · CLASS UNAVAILABLE
CODE NH-ERR-404 · STATE SIGNAL VOID

The Harbour executed a registry query against the declared coordinate.
No record was returned.

This does not constitute failure.

In industrial systems, the majority of output leaves no formal trace.
An empty registry is not absence - it is unregistered reality, and therefore a valid signal.

INTERPRETATION

Nothing is recorded at this coordinate.
Treat this as observation, not alarm.

If presence was expected, verify:

- whether the artifact was formally registered
- or merely presumed to exist

Assumption without record does not constitute structure.

OPERATIONAL NOTE

This produktblad is issued without obligation.
It provides context for registry-empty conditions and signal discontinuities.

The Harbour does not pursue acceleration.
It enforces stability, traceability, and bounded interpretation.
